

Guying the Spiderbeam 12m HD Spiderpole

Attach 3 (preferably 4) guy lines to the pole above segment number 7 (height = 7m). We recommend a guying distance from the pole of 5 to 6m. This results in a guy line Length of approx. 10m. You will need $4 \times 10\text{m} = 40\text{m}$ of 2mm Kevlar here rope. We recommend purchasing one roll (50m) of Kevlar rope and cutting it into 4 pieces, each 12m long. NOTE: 1m = 3.3 ft.
