

Inserting the tiny aluminum tubes inside the center hub's 4 large aluminum tubes:

The manual suggests cutting out a piece of cardboard and using it as a “picker arm” to help insert the tiny tube into the larger tube:

This helps but there is a much better way.

Clamp one clothespin onto the center of the tiny tube.

Clamp the second clothespin onto the other end of the first clothes pin.

Now you can easily insert the tiny tube into the larger tube and adjust it.
